what is C++?

→ C++ is a general purpose programming language. It's used to create compilers, games, anything from. An application music player is even used in games.

Hello world.

A C++ program is a code of commands to bring
include <iostream>

using namespace std;

int main()

{

cout << "Hello world";

{

* Getting the tool & you can run & share your C++ code on playground, without installing any additional software.

① IDE

② compiler

printing a text:

you can add multiple insertion operation after

cout << "this" << "is" <<

"welcome";

Comments:

A comment denoting with two backslashes (//) is called comment. The slashes tell the compiler to ignore everything that follows, until the end of the line.

Teacher's Signature

```
#include <iostream>
```

```
using namespace std;
```

```
int main()
```

```
{
```

```
    cout << "Hello world";
```

```
    return 0;
```

```
}
```

```
cout << "H";
```

variable:

Integer, a built-in type, represents a whole no

value. Define integer using the keyword `int`, `int my variable`
`10;`

Working with variable:

specifying the data type is required when the variable is declared. After that variable be used without referring to the data type.

```
int a;
```

```
a = 10;
```

Basic arithmetic operation b.

Addition	+	$x + y$
----------	---	---------

Subtraction	-	$x - y$
-------------	---	---------

Multiplication	*	$x * y$
----------------	---	---------

Division	/	x / y
----------	---	---------

Modulus	%	$x \% y$
---------	---	----------

* Assigned & increment operations :-

The simple assignment operator (=) assigns the right side to the left side.

* Conditional & loop.

• The if statement

The if statement is used to execute some code if a condition is true.

```
if (condition) {
```

```
    statement
```

```
}
```

* The else statement

An if statement can be followed by an optional else statement which executes when the condition is false.

```
if (condition) {
```

```
    if
```

```
    else {
```

```
}
```
